DESCRIPTION

The SmartKing® On Card software is a complete, convenient and computer based electronic locking system. From small to large locking applications, SmartKing® On Card is capable of controlling and managing a maximum of 64,000 doors and 64,000 users. All commands and information for locks and access rights are stored in user's media which can be updated anytime through any online SmartKing® wall readers. The web based software is fully featured with lock settings, time schedule, user profile management, and issuing cards.

The lost cards can be banned automatically after reissuing user cards. A clear record and monitoring page can help administrators supervise the whole system. The user friendly graphical user interface is multilingual which make it very easy to manage. Thanks to the efficient, simple, secure and portable battery powered SmartKing® USB programmer, locks can be initialised, read or written to.
